

Victor Sint Nicolaas

 github.com/vicsn |  victor.s.nicolaas@protonmail.com |  victorsintnicolaas.com

Seasoned software engineer and manager keen to bring computer science theory to life. My work spans the design, formal analysis and release of several cryptographic protocols, ranging from high level applications ( VAT fraud detection) to lower level primitives ( dynamic dispatch).

EXPERIENCE

aleo.org / provable.com

Protocol engineer, promoted after 1.5 years to VP of protocol

2023 - Now
Berlin, Germany

- Managed up to 8 FTE across cryptography, virtual machine and consensus logic
- Implemented batch proving in the succinct argument (zero-knowledge proof) system  
- Extended ACL2-based and Lean-based formal verification efforts 
- Supported researchers and gave talks on verifiable computation  

summitto.com

Co-founder, CTO

2017 - 2022
Amsterdam, Netherlands

- Managed up to 7 FTE, both technical and non-technical roles
- Co-led managing activities from hiring and financing to strategy and product development
- Ran working groups with i.a. Dutch Ministry of Finance and EU Commission 
- Designed and built a system for cryptography-enabled VAT fraud prevention product 

SELECTED OTHER PROJECTS

Lean code quality tracker

Static-analysis dashboard tracking code health across the Lean theorem-prover ecosystem

2026

zk.golf bug report

Found that zk.golf's autoresearch tool was silently undercounting R1CS density, skewing its benchmark rankings

2026

Witness encryption for functional commitments

Implemented a witness encryption library built on functional commitments

2023

Lookup arguments to proofs of inference

Won 1st place in a hackathon applying succinct arguments to machine learning

2023

Deterministic PGP key generation

Tool to deterministically derive PGP keypairs from a seed, for reproducible backup and recovery

2019

Bitcoin network scanner

Implemented a Bitcoin crawler from scratch to visualize the live topology of the Bitcoin P2P network

2017

Personal blog

Long-running blog covering notable developments in computer science

2017-now

Part-time manager at non-profit OFoundation

Evaluated charities for cost-effectiveness while recruiting volunteers and raising funding

2014

EDUCATION

University of Amsterdam, Netherlands

Bachelors of Economics, econometrics, extra courses in computer science which led to several early hackathon participations. GPA: 8/10

2013 - 2017

TECHNOLOGIES

Languages: Rust, C++, ACL2, Lean, basic Golang and Python.

Infra / DevOps / Sysadmin: Docker, Ansible, Terraform, Prometheus, Grafana, too many unix utilities

Web: HTML, basic CSS and JavaScript (React)

Programmable cryptography libraries: snarkVM, arkworks, circom, libsnark, gnark, emp-toolkit
